iMove Announces Development of Portable Wide-Area Persistent Surveillance System

First Fly Away Wide-Area Surveillance System to be Delivered to DoD for Force Protection

September 28, 2006 - Portland, OR - iMove®, Inc., the leading developer of immersive video security solutions for wide-area persistent surveillance, announces the development of the inView Fly-Away Surveillance System. This transportable wide-area surveillance system offers the advantages of fixed perimeter surveillance capabilities in a rugged, transportable system designed for rapid deployment and setup in remote or temporary locations.

inView Fly-Away Surveillance Systems offer full multi-sensor immersive video surveillance capabilities in a rugged, transportable configuration. As with all inView systems, wide areas or long perimeters can be covered with fewer sensor locations and fewer operators due to iMove's WideView immersive video architecture. Fly-Away meets the transportable and rapid deployment requirements valued by DoD and Intelligence Community (IC) users.

Fly-Away systems are designed to be deployed on-site by two people in approximately four hours, including equipment configuration, sensor placement and software initialization. In less than a day, Fly-Away capabilities can establish a wide-area security perimeter with continuous coverage and full replay capability for any incidents occurring in the coverage area.

"Whether it is forward force protection or emergent infrastructure surveillance needs arising from specific security threats, inView Fly-Away provides a much needed rapid response capability for wide-area surveillance needs" said John Herring, President & CEO.

Key Specifications of inView Fly Away

- Provide immersive wide-area surveillance of a perimeter or area.
- Portable via standard shipping methods.
- Ability to be installed by two people in up to four hours.
- Can remain functional on site for months if necessary.
- GIS console interface for enhanced situation awareness.

About iMove, Inc.

iMove is the leading developer of immersive visual solutions for mission-critical security and surveillance applications. iMove's solutions deliver superior visual information and greater situational awareness using automated features to dramatically enhance mission performance while reducing cost and complexity. Our solutions are deployed at home and abroad for the prevention of potentially catastrophic incidents associated with critical infrastructure and for intelligence and special operation forces mission planning and training systems.
